# MIG welders add several features

MILLER Electric Mfg. Co. has a new line of MIG welders available for farm and ranch use aimed at operator ease-of-use and arc stability.

The new Millermatic DVI2, 212 and 252 maintain the same high arc stability characteristics of their predecessors (the DVI, 210 and 251), but add several new features such as the ability to roll rather than lift gas cylinders into place, and the ability to switch easily between steel and aluminum applications.

Another innovation is an angled dual-gear drive system with a spring-loaded drive roll for easy wire changes and a tool-less drive roll changeover. Also, the new models have an EZ-Access consumable compartment and parameter chart located on the front of the machine below the control panel.

In addition, Miller's exclusive Gun-On-Demand is featured on both the 212 (standard) and the DVI2 (optional). This feature allows users to keep both a MIG gun and a Spoolmate spool gun (for aluminum) installed at the same time and simply pull the trigger on either gun to select it for welding.

For more information, visit *millerwelds.com/products/mig/allinone_products.html.*

**FARM AND RANCH WELDERS:** Miller Electric Mfg. Co. upgraded a popular line of welders with its new Millermatic DVI2, 212 and 252 models. All three machines offer the ability to roll gas cylinders on and off and not lift them as older models required.

**NEW AIR SYSTEM:** Amity Technology LLC is offering this new single-hopper, tow-behind air system for precision fertilizer placement.

## Fertilizer flexibility

THE single-hopper, tow-behind air system by Amity Technology LLC gives growers fertilizer application accuracy and the option for variable-rate technology.

With a stainless-steel tank, optional hitch for an anhydrous ammonia tank and options for ground-drive or variable-rate control, the unit offers long-lasting flexibility for fertilizer placement.

For more information on the air system, contact Amity in Fargo, N.D., at 701-232-4199.

**NEW PUMPS:** CDS-John Blue Co. has a new line of 12-volt pumps available for fertilizer and chemical application.

## Quick-connect chemical pumps

CDS-John Blue Co. is offering a new line of 12-volt fertilizer and chemical pumps.

The three new models come with capacities of 2.2, 3.6 and 4.8 gallons per minute, plus they feature quick-connect ports, a site glass strainer and five hose barb quick-connect fittings.

Models are also available without the quick-connect ports and come standard with a ½-inch NPT port.

The new pumps are weatherproof, feature a four-piston diaphragm, operate as automatic on demand, and carry a two-year warranty.

For more information, call 800-253-2583 or visit *www.cds-johnblue.com.*

Gin by-products of cotton containing Monsanto's biotech traits, including cottonseed for feed uses, are fully approved for export to Canada, Japan, Mexico and South Korea. Cottonseed containing Monsanto traits may not be exported for the purpose of planting without a license from Monsanto.

Always read and follow pesticide label directions. Roundup Ready crops contain genes that confer tolerance to glyphosate, tahe active ingredient in Roundup® agricultural herbicides. Roundup agricultural herbicides will kill crops that are not glyphosate tolerant. Growers should be sure that the glyphosate product used in these applications over Roundup Ready Flex cotton has been tested for that use so as to reduce the risk of leaf damage. See the Roundup Ready Flex Technical Use Guide for details.

**NEW LANDA MHC SERIES:** Landa has introduced a new, six-model lineup of high-pressure, gasoline-powered pressure washers. The series features Honda or Subaru-Robin engines and heavy-duty frames and rolling gear.

## Pressure washer provides stability

LANDA introduces its new high-pressure, gasoline-powered, on-site cleaning machine, the MHC series, for 2008, and says it offers more quality, safety functionality and stability than any other pressure washer in its class.

The company offers six models of the new series with engines by Honda and Subaru-Robin ranging from 2.7 to 3.5 gpm and pressures from 2,400 to 3,500 psi. Three models feature both electric and recoil starting and three feature Landa's proprietary Super Duty Regulator, which allows the machine to operate without a battery or magneto system.

The MHC series features Landa's trademark "laydown" coil, a fully welded 1¼-inch-square tube frame, the Landa pump, 13-inch pneumatic tires, a 10-gallon fuel tank and an easy-access battery box and end-mounted burner.

For more details, call 800-547-8672, ext. 103.

## Get clearer view with new wiper

THE makers of Rain-X windshield solvent and other automotive products is introducing the new Latitude Wiper Blade.

Designed to hug the contour of the windshield, Latitude blades provide even pressure along the full length of the blade for chatter-free, clear vision. The hardware is designed with fewer parts, jointless construction and with an eye toward resisting ice buildup for improved drivability in ice and snow.

For more information on the Latitude Wiper Blade, call 973-939 2871.

**LATITUDE WIPER BLADE:** The new Latitude Wiper Blade by Rain-X is engineered for reduced ice and snow buildup, and for its windshield-hugging ability.
